HOW TO ENGAGE CITIZENS IN FUTURE-THINKING ABOUT **NEW AND EMERGING TECHNOLOGIES?**

The NANO2ALL project organized six citizen dialogues across Europe in which creative and collaborative methods were used to make citizens reflect on potential societal impacts of nanotechnologies. Citizens physically engaged with crafts material to build a nanotechnology application object of the future, and constructed short techno-moral narratives around these objects. These types of exercises proved to be supporting and stimulating structures to help participants in expressing their views and gaining deeper understanding of their needs, concerns and values when it comes to new nanotechnology developments.
